

# AuditM Mobile Auditing Software

Low-cost, flexible counting audit system

[www.auditm.net](http://www.auditm.net)

## Control Website

System configuration, venue and routes management, real-time tracking, and usage reports and charts in one easy to use website

## Mobile Data Entry

Simple counting software on mobile devices, and automatic download of survey venues, aids fast and accurate auditing

## Automatic Data Transfer

Automatic audit count transfer to the control website ensures fast and accurate capture of remote audit data

## Customisable Audit Setup

Audit slots can be created for 1 hour periods to 5 minute periods. Non-contiguous audit slots can be created with ease

## Problem?

Many organisations want to collect data that relates to the usage of facilities or spaces over time, but are faced with an often bewildering array of complicated and expensive counting technology, including photocell sensors, video and image recognition, and CCTV extraction systems. Some organisations resort to collecting data manually, with auditors writing count results on paper, leading to the time-consuming and error-prone task of entering results into spreadsheets or databases to produce usage reports. Other organisations simply don't perform the task, believing it to be too expensive and resource-intensive.

## Solved!

AuditM is designed to solve these problems by offering a low-cost, easy to use and accurate audit counting system that uses existing technology that most people are already familiar with - websites, smartphones and tablet PCs. By using these well known technologies in an integrated fashion, AuditM can be applied to an almost infinite number of auditing and counting scenarios. Virtually any task that requires the remote collection of count data for collation and reporting by a central system can be accomplished by using AuditM.

### AuditM Key Benefits

- Flexible, low-cost licensing
- Easy setup and maintenance
- Fast, accurate auditing of any type of space
- Familiar technology
- Automatic data transfer
- Real-time progress tracking
- Customisable audit slot times
- Unlimited audit venues
- Audit route definition tools
- Very powerful data filtering
- More than 20 usage reports
- Customisable utilisation charts
- Compare results for 4 audits
- Export to Office and PDF

# AuditM Usage Scenarios

## Popular auditing environments

### Education Space Audits

AuditM is ideal for university and college space utilisation survey collection and presentation. The central web server allows audit managers to specify audit routes for potentially hundreds of teaching rooms. State of the art utilisation reports and charts display the essential information required to make informed space management decisions.

### Office Desk Utilisation

Hot desking and flexible work environments are becoming increasingly popular, yet obtaining information about office utilisation has not been easy. AuditM solves this problem by allowing auditors to unobtrusively monitor office desk utilisation. AuditM is a low-cost solution to desk utilisation data collection - no expensive and unreliable photocell sensor technology is required.

### Library Usage Surveys

Libraries are under increasing financial pressure, so gaining information about the facilities used in a library provides vital data for optimisation planning. The silent and unobtrusive use of the mobile device counting software, combined with the benefit of not having to disrupt the library by installing sensor technology, makes AuditM an attractive choice for library usage survey work.

### Auditing Public Space Use

The ability to audit the actual use of public assets provides the opportunity to benefit from much more detailed information when making planning decisions and assessing future demand. From tennis courts to open areas, catering outlets to bowling greens, the usage profile of community facilities can be easily recorded and presented, using AuditM's integrated data capture and reporting system.

## AuditM Licensing

In response to the differing needs and budgetary constraints of our clients, we offer a highly flexible licensing model that ensures smooth implementation of AuditM with a minimum of administrative fuss.

Because of its low cost and ease of installation, AuditM is ideal for one-off or occasional audits, but the system can equally be used for regular or yearly usage surveys. We are happy to discuss individual requirements with prospective clients to define a suitable licensing model.

Mosaic Software uses Microsoft's Windows Azure platform to host its AuditM Cloud service. Chosen for its data security, scalability, low costs and industry standard uptimes, AuditM's Cloud service offers clients the full benefit of using the system without the need to install the central control website on their own servers. This cuts administrative and IT support loads – we do all the installation and maintenance work as part of the package. All that's required is for auditors to install the counting software on their mobile devices.
